

## Task 2

# Implementing Two-Factor Authentication (2FA) on social media

To further enhance account security, I implemented Two-Factor Authentication (2FA) on my LinkedIn profile, following these steps:

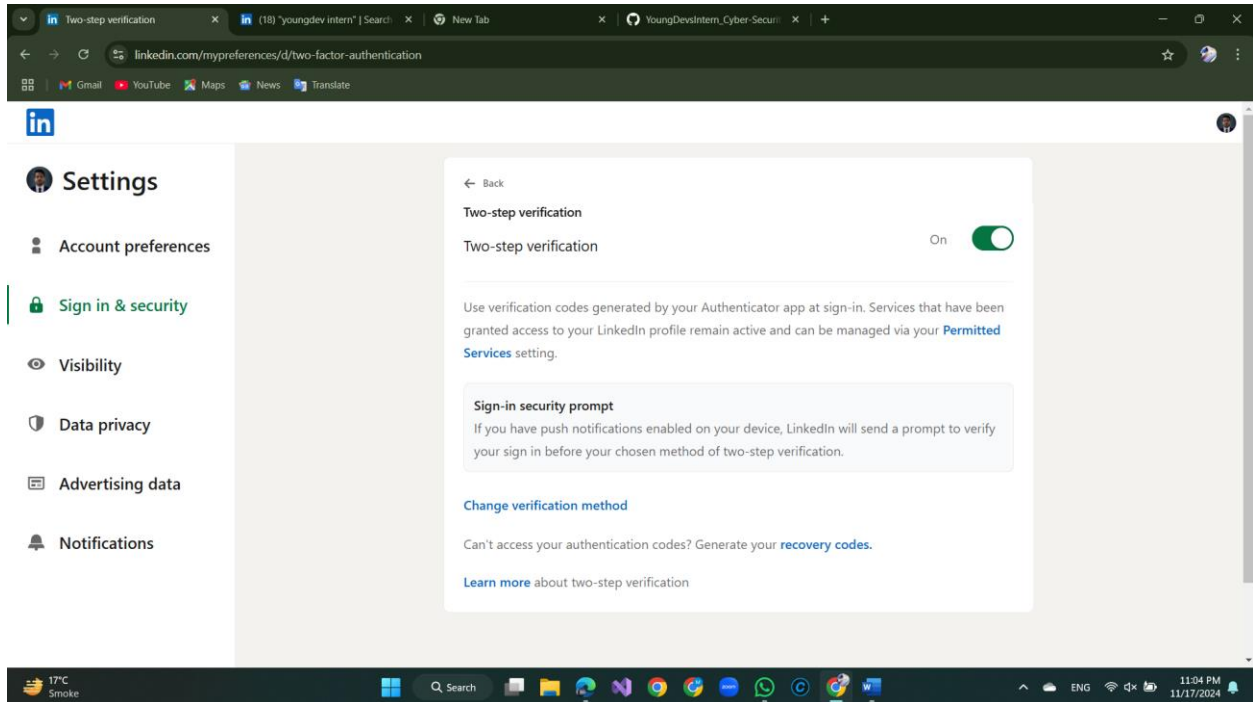

### 1: Access LinkedIn Settings:

- Logged into my LinkedIn account and navigated to the **Settings & Privacy** section.

## 2: Locate Two-Factor Authentication:

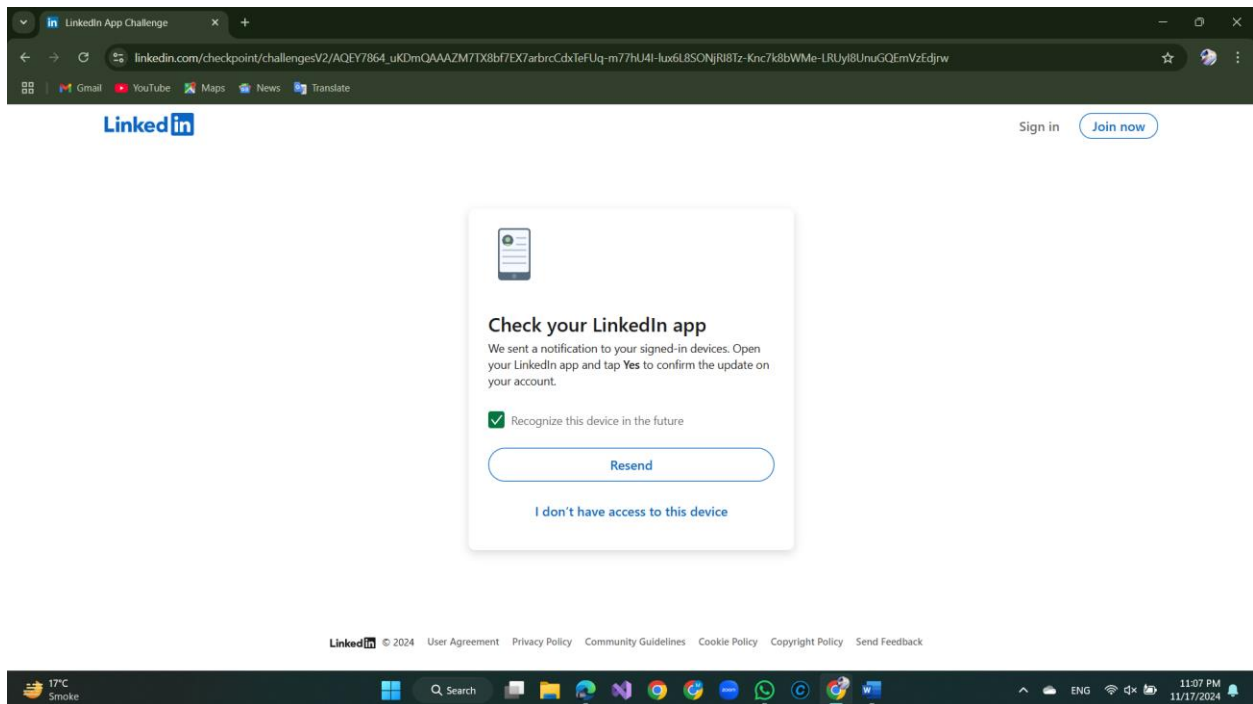

- From the **Account** tab, I found the **Two-Step Verification** section and clicked on it.

If you have don't one two-step verification, then you simply click step up.

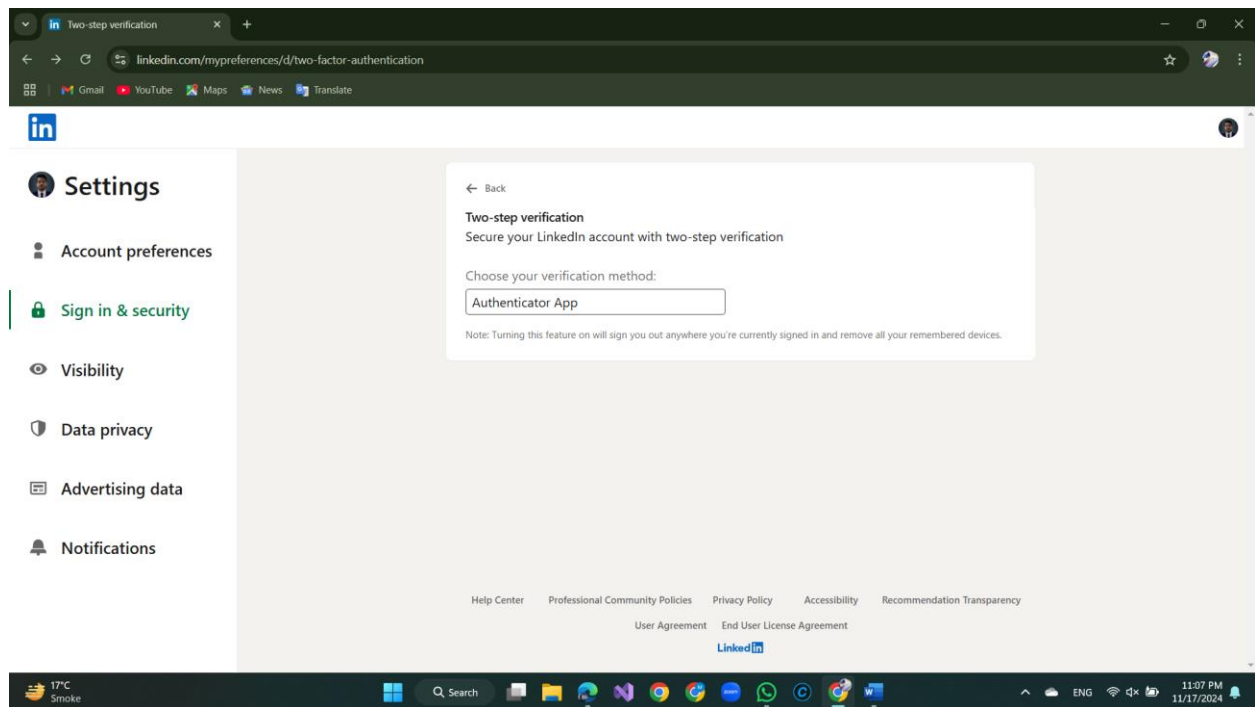

## 3: Begin the Verification Setup:

- LinkedIn prompted me to verify my identity through the LinkedIn mobile app, confirming the update in account security.

#### 4: Select Authenticator App:

- Once verified, I chose the **Authenticator App** option as my preferred method for 2FA.

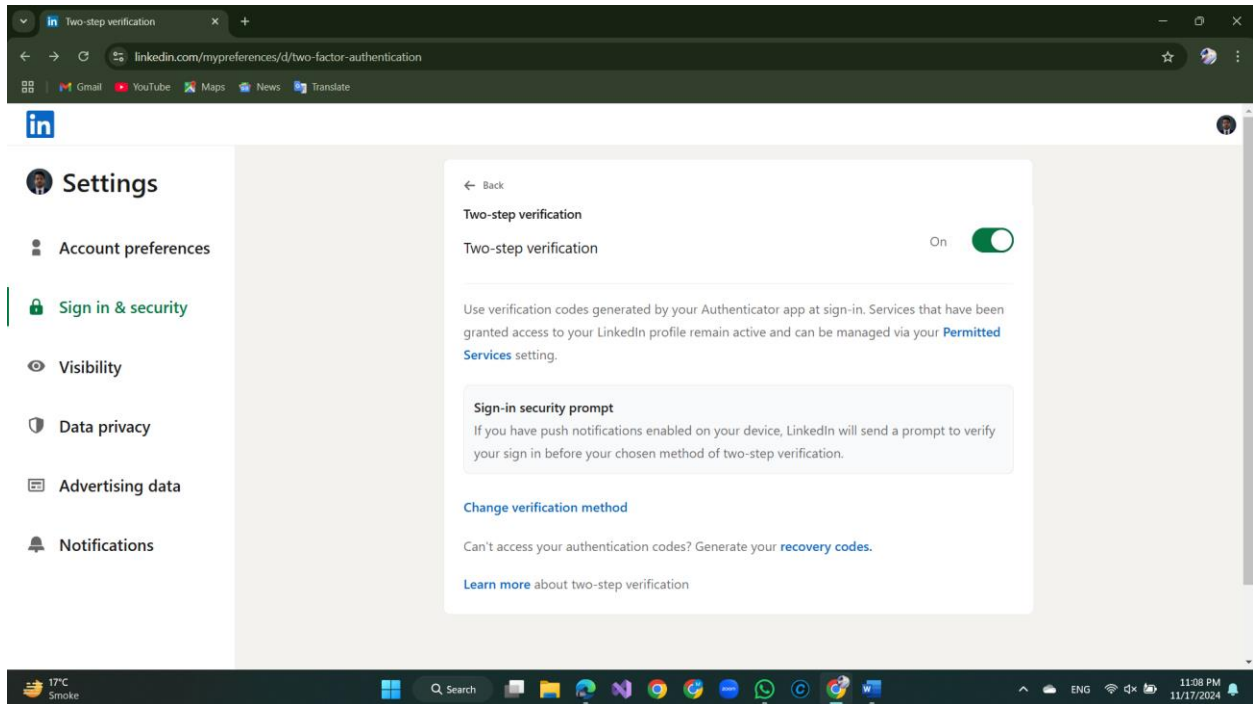

## 5: Linking Authenticator App:

- Opened my authenticator app (such as Google Authenticator or Microsoft Authenticator) and scanned the QR code provided by LinkedIn to add my LinkedIn account.

## 6: Complete the Setup:

- After successfully scanning the QR code, the authenticator app generated a time-based one-time password (TOTP), which I entered into LinkedIn to complete the 2FA setup process.

By completing this process, I ensured my LinkedIn account now requires both my password and a verification code from my authenticator app for secure login.
