

Task 2

Use a Password Manager

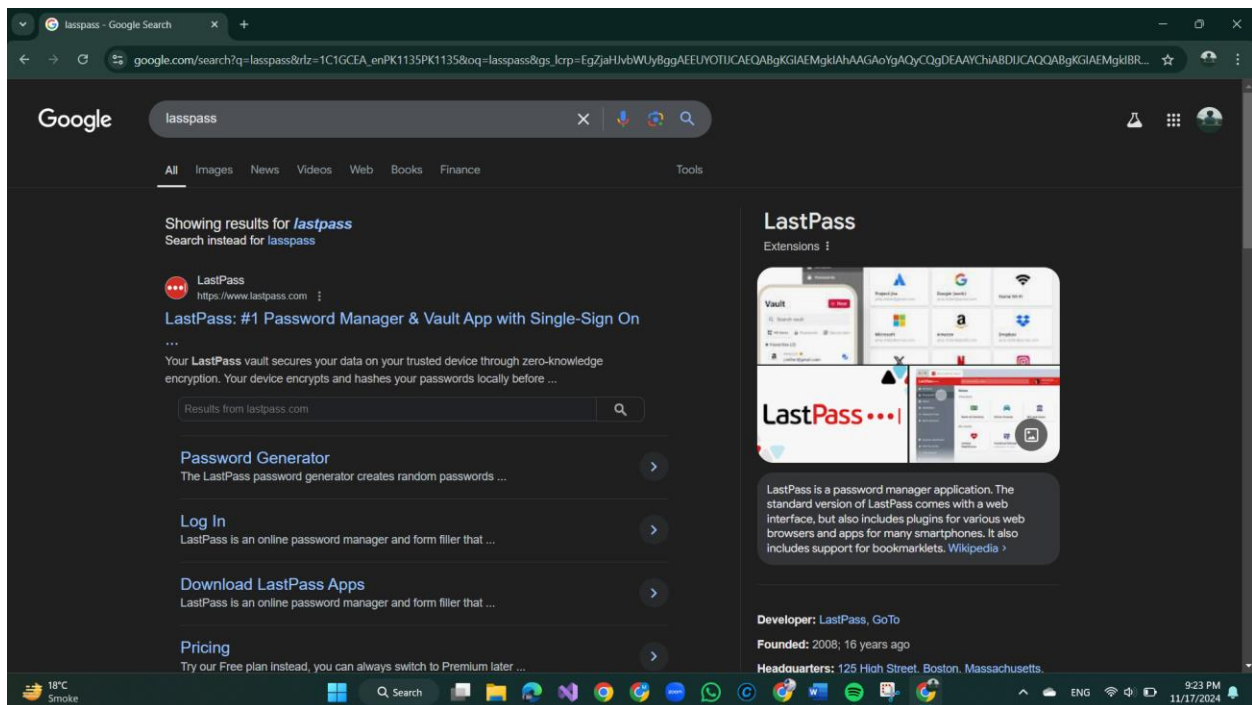

➤ Objective

Using the LastPass password manager, securely store, manage, and generate passwords.

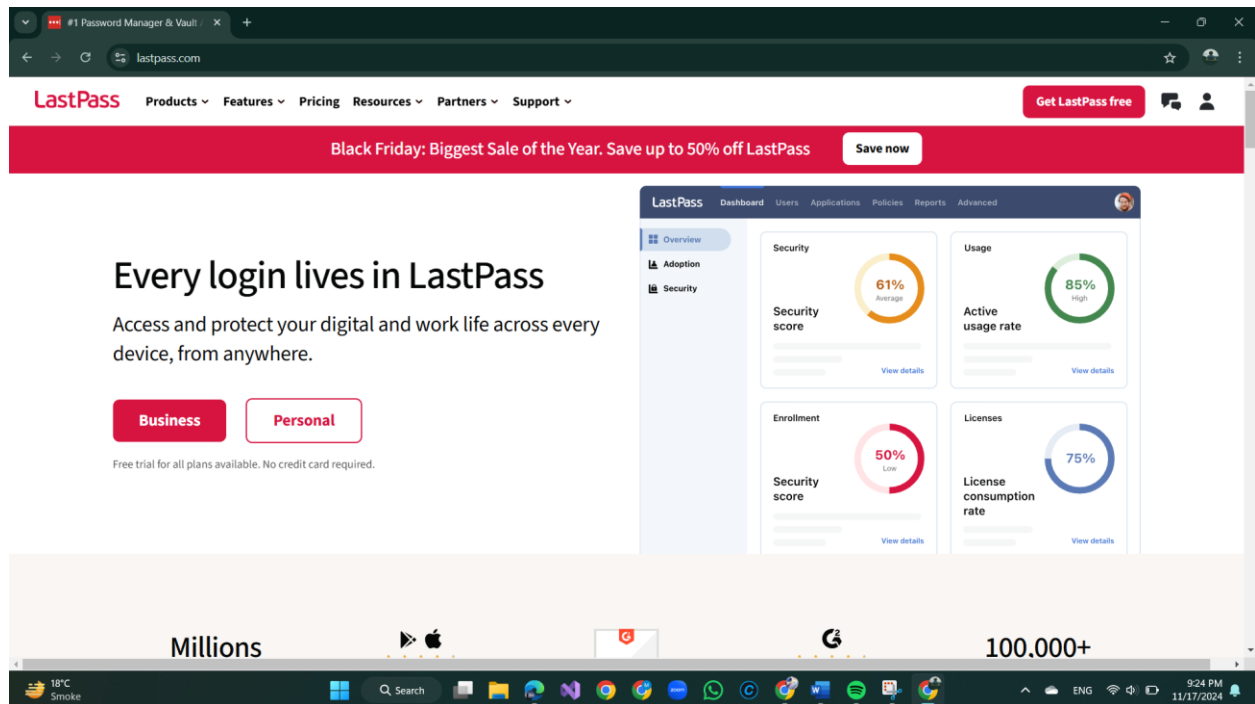

➤ Steps

1. Search and Access LastPass:

- Open your browser and search for "LastPass" on Google.

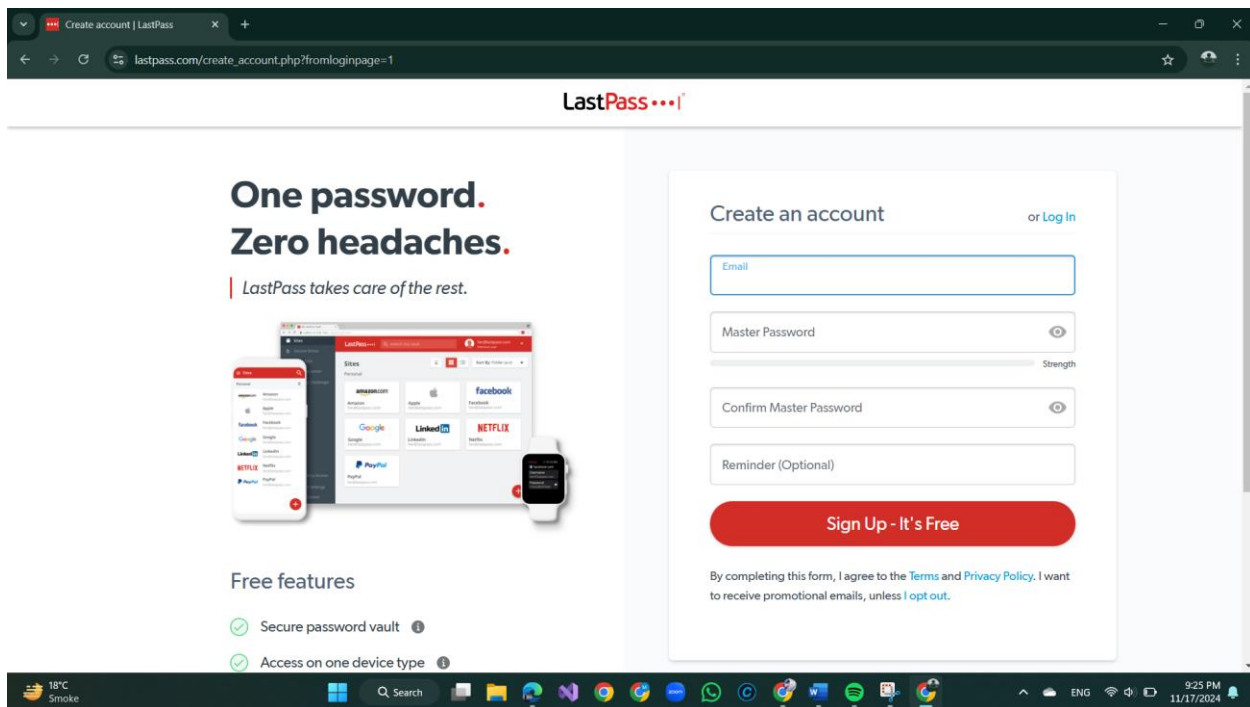

- Navigate to the official LastPass website: lastpass.com

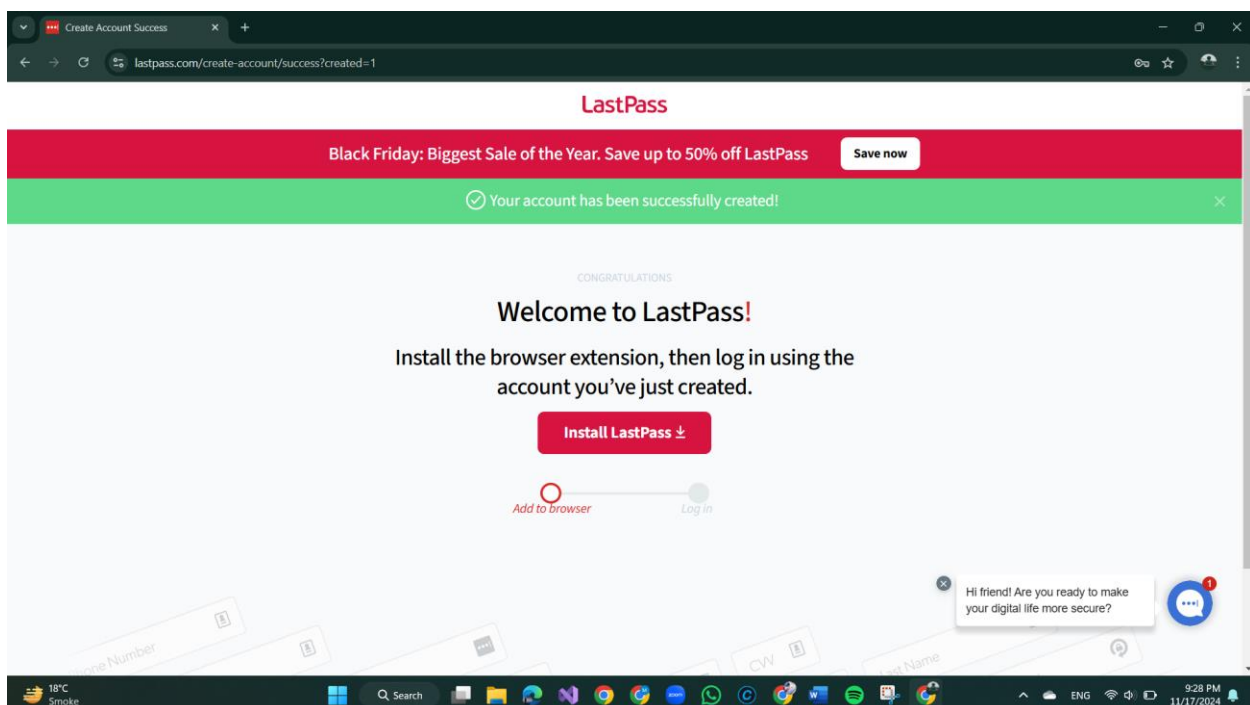

2: Sign Up for LastPass:

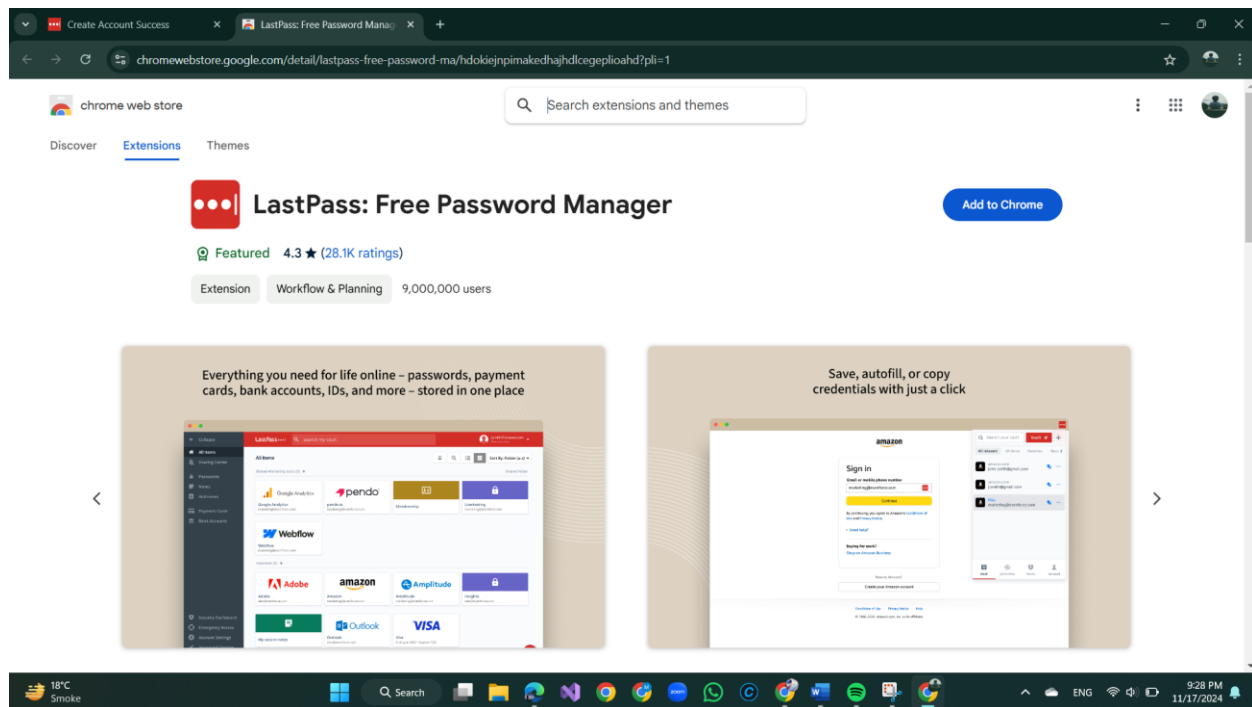

- On the LastPass homepage, click **Get Started** or **Sign Up**.
- Follow the prompts to create a new account using your email address and a secure master password. The master password will be used to access your stored credentials.

3: Install the LastPass Extension:

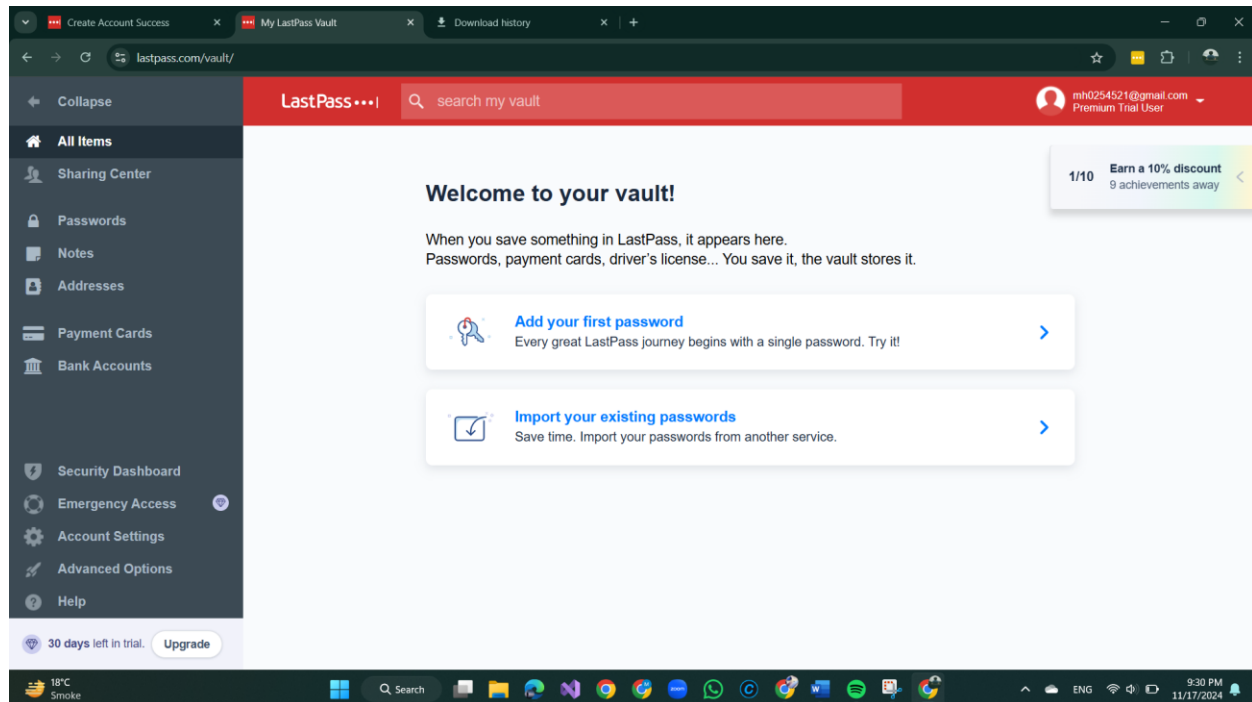

- After signing up, you will be prompted to install the LastPass browser extension. Click **Install Extension** to add it to your browser (in this case, Google Chrome).
- Confirm the installation, and the LastPass icon should appear next to your address bar.

4: Open LastPass:

- Click on the LastPass icon in your browser's toolbar.
- Log in using your email and the master password you created during sign-up.

5: Save a Password:

- To save a password, go to any website where you have a login (e.g., Gmail, Facebook).
- After entering your login credentials, LastPass will prompt you to save the username and password. Click **Save** to store these securely in your vault.
- You can manually add passwords by clicking the LastPass icon and navigating to **Vault > Add Item**.
